ABHISHEK KUMAR

Full Stack Developer | Frontend Developer | Lead Software Engineer |

+91-8936018873 | abhishekkr123singh@gmail.com | linkedin.com/in/abhishek-kumar-6b27691b4

PROFESSIONAL SUMMARY

Full Stack Developer (frontend-focused) and Team Lead with 4.5+ years of experience building enterprise web applications with Angular, TypeScript, JavaScript (ES6+), RxJS and Tailwind CSS, backed by Java, Spring Boot, REST APIs, Microservices, RabbitMQ and SQL. Led frontend and backend delivery of Warehouse Management System (WMS) applications, including a scalable Angular architecture, a Web Components design system and event-driven Spring Boot services. Shipped 8+ WMS modules across UI, API and database layers, plus a Playwright-based PDF microservice. Experienced in sprint planning, code reviews, mentoring, HLD, API design and CI/CD.

TECHNICAL SKILLS

Frontend: Angular, TypeScript, JavaScript (ES6+), RxJS, Web Components,UI/UX, HTML5, CSS3/SCSS, Tailwind CSS, Bootstrap, Angular Material, PrimeNG

Backend: Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, Maven, Playwright (PDF generation)

Messaging & Database: RabbitMQ, SQL

DevOps & Tools: Kubernetes, CI/CD, Git, GitHub, GitLab, IntelliJ IDEA, VS Code

Testing & Quality: Cypress, Playwright, JUnit, SonarQube, ESLint

Practices: Agile, Scrum, Sprint Planning, Team Leadership, Code Reviews, Mentoring

AI-Assisted Development: Windsurf, Claude

PROFESSIONAL EXPERIENCE

Lead Software Engineer **August 2025 – Present**

Addverb Technologies, Noida

- Developed manual and automated Cycle Count module covering frontend, backend, APIs and database integration. Took ownership of the Cycle Count module from requirement analysis and technical design through development, integration and production support, and guided 2 team members during implementation to drive the module toward production readiness.
- Engineered a reusable PDF generation microservice using Node.js and Playwright, with an HTML/CSS template-based approach to generate standardized PDF documents; built for reuse across 4 business workflows and applications, cutting document-generation effort by 90%.
- Authored High-Level Design (HLD), and RESTful API contracts for new WMS features, including HU (Handling Unit) scan, HU count, and inventory audit workflows, translating business requirements into scalable technical solutions.
- Integrated RabbitMQ message queues to support event-driven workflows between services (e.g., cycle count, inventory updates, and HU scan events), improving system decoupling, reliability, and responsiveness.
- Implemented backend enhancements for warehouse and inventory workflows using Java and Spring Boot, ensuring reliable, well-defined communication between frontend applications and backend services through RESTful APIs.
- Built data access layers with Spring Data JPA, Hibernate, and SQL to handle persistence, retrieval, and optimized queries for warehouse and inventory data.
- Led Sprint Planning, Daily Scrums, task prioritization and code reviews for a 6-member team (4 developers, 2 testers), achieving 95% on-time sprint delivery.
- Introduced AI-assisted development tools such as Claude and Windsurf to accelerate feature development, debug issues faster, and explore unfamiliar codebases, improving overall engineering productivity by 70%.
- Created responsive, reusable UI components and workflows for Handheld Terminal (HHT) and desktop WMS applications, improving task completion time by 80%.

Software Development Engineer **August 2022 – August 2025**

Addverb Technologies, Noida

- Led a 4-member Frontend/UI team delivering enterprise-grade Warehouse Management System (WMS) applications used in large-scale automation environments.
- Architected and implemented the Addverb Design System, standardizing reusable UI components across 4 production-ready frontend applications to improve scalability, consistency, and development efficiency.
- Developed and maintained 7+ enterprise WMS applications (desktop and HHT) using Angular, React, TypeScript and REST APIs, delivering responsive, user-friendly interfaces for warehouse operations.
- Built reusable components and shared submodules, improving development efficiency and UI consistency by 70% across applications.
- Delivered WMS modules including Midbound, Outbound, Cycle Count, Ad Hoc Bin-to-Bin, Production Order, Inventory

UOM Master and UOM Conversion Master across the Angular frontend and Spring Boot backend.
- Collaborated with the process team and warehouse operators to translate operational requirements into frontend solutions, ensuring seamless integration with backend processes and APIs.
- Resolved production issues through log analysis and API troubleshooting to keep critical warehouse operations stable.
- Enforced ESLint and coding standards across 10+ projects, improving code quality, consistency and maintainability.

Software Development Engineer Intern **January 2022 – July 2022**
Addverb Technologies, Noida

- Converted UI wireframes into responsive, reusable components using Angular and React.
- Implemented Cypress-based frontend tests to improve application reliability and regression coverage.
- Refactored legacy frontend code and fixed defects, reducing bugs by 70%.

EDUCATION

Bachelor of Technology in Information Technology, Birla Institute of Technology, Mesra, Ranchi **July 2022**

CERTIFICATIONS

- Namaste React, Namaste JavaScript and Node.js Course Certificate
- Agile Development Course (5 days)
